Recycled Rubber Tiles

Interlocking tiles are available in your choice of pigmented rubber top or EPDM top. Rubber tiles offer superior shock absorption, low maintenance, long wear, and accessibility. They are also perfect for indoor applications in addition to outdoor since there is no on site mixing required.

Our Interlocking Tile utilizes a patent pending, locking edge to reduce lateral shift, corner lift, and strain on tiles. Brightly colored EPDM topped tiles are also available, which offer a broader range of colors and increased durability.

Basic Specifications

- Solid colors and multi-colored tiles
- Various thicknesses for your playground's fall height
- Sub-base should be concrete, asphalt, or compacted aggregate with suitable drainage

Tile Installation Detail
