Ms. Caroll Mortensen, Director
CalRecycle
1001 I Street, P.O. Box 4025
Sacramento, CA 95812-4025

RE: Newby Island Sanitary Landfill expansion permit application

Dear Ms. Mortensen:

I write representing the City of Milpitas regarding the application pending before CalRecycle from the Newby Island Sanitary Landfill to expand vertically 95 feet from its current operations.

The application is incomplete under 27 CCR §21865 and therefore should be rejected.

The odor problem

“Each disposal site shall be operated and maintained so as not to create a public nuisance.” 27 CCR §20760.¹

The Newby Island landfill has a long-enduring and still-ongoing failure to avert nuisance odors. The landfill accepts, handles, stockpiles, land-spreads, composts and recycles a list of unpermitted materials which require close regulation, because they clearly increase odor nuisance.

For example, “mixed waste” composting at the site has in the past included food waste. Thus as early as 1999 the landfill’s pilot food waste composting was cited by the state for improperly stockpiled chicken parts.

According to Republic Services’ website, large quantities of “wet-dry” waste are now being accepted at the landfill facilities.² Yet, neither the supporting environmental impact report for the proposed permit here, nor the 27 CCR §21865-required documentation even mention it.

¹ “ ‘Nuisance’ includes anything which is injurious to human health or is indecent or offensive to the senses and interferes with the comfortable enjoyment of life or property, and affects at the same time an entire community or neighborhood or any considerable number of persons although the extent of annoyance or damage inflicted upon the individual may be unequal and which occurs as a result of the storage, removal, transport, processing or disposal of solid waste.” 14 CCR §17225.45.

² <http://www.republicservices.com/site/santa-clara-ca/en/pages/city-of-san-jose.aspx>

Under the current permit application, the landfill operations would be permitted to conduct “mixed waste” composting. But the application fails to even describe the actual food-waste, wet-dry and “co-composting” currently conducted without permit at the facility.

The proposed permit would also allow the use of biosolids—dried human waste from nearby beds—as landfill cover. According to recent inspections, the stockpiling and use of biosolids has been correlated with wind directions as a source of odors—highly objectionable odors—throughout the adjoining Milpitas community. Indeed, a massive spike in odor complaints to the Bay Area Air Quality Management District (ABBQMD) have been reported this month alone: 719 so far in January versus 121 last month.

This violates 27 CCR §20690(a)(9): “Storage and handling of waste derived materials at the landfill for use as alternative daily cover shall be conducted in a manner to protect public health and safety and the environment, and control vectors, fires, odors, blowing litter, scavenging, and nuisances.”

More recently the landfill has been cited for stockpiling putrescibles headed to the site’s Recyclery operation (43-AN-0014). That practice was observed and cited in recent pre-permitting inspections by CalRecycle.

According to the December 9, 2014 inspection report by CalRecycle, the Recyclery has been using the landfill area as its backup storage for mixed waste materials, and the Recyclery has “consistently” failed to move waste through the facility within 48 hours as required by 14 CCR 17410.1.

It is clear that the landfill operations are playing a shell game with materials to evade the State Minimum Standard requiring material to be disposed or processed within 48 hours. According to the inspection report: “The landfill has been functioning as a transfer station for the adjacent MRF, the BFI Recyclery. An open air bunker has been utilized for stockpiling incoming MSW and outgoing processed materials.”

From the LEA’s November 25, 2015 inspection: “An open bunker which was noted on previous inspection reports containing MSW and outgoing materials from the Recyclery. This procedure was determined to be functioning as a transfer station. The facility permit does not allow for this activity.”

The report continues: “A records check found that the Odor Complaint log contained information on complaints and the wind direction at the time of the complaint. Many showed a correlation between Newby Island, the ESE afternoon prevailing winds and the complaints. Several of these complaints were randomly selected, scanned and sent to the LEA for review.”

The LEA is required to respond to odor complaints, yet the City of San Jose, LEA for the facility, includes nothing in the permit application of odor complaints. This despite more the 200 odor complaints relating to the landfill in the last year alone. See Exhibit A herewith.

The odor problem negatively effects school, government and business activities in Milpitas and elsewhere. See Exhibit B, declarations by effected representative individuals.

The JTD incompleteness

Despite the clear nuisance of odor from the facility, the permit application submitted to CalRecycle fails to provide required documentation. The Joint Technical Document (JTD) submitted in support of the permit includes no information on odor abatement.

Other deficiencies in the JTD also relate to odor problems, especially the failure to demonstrate the effectiveness of landfill cover in minimizing odors.

Failure of the JTD to describe nuisance odor abatement

The discussion of odor nuisance and its proposed abatement under the proposed permit is found at page B.7.1.8 of the JTD. The discussion lacks entirely the history of odors from the landfill.

A complete JTD requires, under 27 CCR §21600(b)(8)(A), that the document: “Describe procedures to prevent or control public nuisances.”

The JTD discussion contains only a cursory survey of odor controls, none addressed to the specifics of the facility. Thus, the JTD does not discuss the particular problems with mixed waste stockpiling which inspectors have uncovered. The JTD fails entirely to reference the particular odor concerns of biosolids and other ADC which would be permitted at the facility under the proposed permit.

Nor does the JTD address how its co-facility, the Recyclery, impacts odors. As recent inspections have shown, the operations of these two facilities are closely intertwined. Materials from the Recyclery are used for ADC at the landfill. Materials for the Recyclery are stockpiled at the landfill.

Nothing in the current permit application has addressed the intersection of the landfill permit with the permit of the composting operation and the Recyclery, certainly not Section B-3.7.1 of the JTD, where it should be addressed.

Before the landfill permit is amended for the greater height, its current practices—many resulting in greater odors—should be detailed in the JTD. Furthermore, the LEA should be required to review the permits of the Recyclery and the composting operation for potential updating before the landfill permit is revised. Failure to do so promotes the finger-pointing common among the facilities.

Failure to demonstrate daily cover requirements

According to 27 CCR §20690(a)(1):

“Alternative materials of alternative thickness for daily cover (other than at least six inches of earthen material) for municipal solid waste landfill units may be approved by the EA with concurrence by the CIWMB, if the owner or operator demonstrates that the alternative material and thickness control vectors, fires, odors, blowing litter, and scavenging without presenting a threat to human health and the environment.”

The JTD submitted in support of the permit application fails to demonstrate that the landfill’s alternative daily cover (ADC) will control odors. Nothing in the odors section of the JTD addresses the substantial evidence of odors from the facility and the ADC thicknesses suggested by the JTD do not meet the requirements of regulation.

The proposed permit and JTD insinuate that ADC using biosolids, green waste, recovery fines and street collections have already been demonstrated and approved. But that is not the case, as a closer examination of the permit application makes clear. The appendices include letters from the 1990s indicating that demonstration was conducted, but no final approvals were given. And the materials addressed appear only to include green waste. No demonstration that odor would be controlled are provided. Yet the very last specification of the currently proposed permit, no. 8 at page 5, states:

“8. Only approved alternative daily cover materials described in the Joint Technical Document may be used.”

Thus the permit would open the door to the JTD’s ADC wish list, without the demonstration required for the materials and for the case-by-case demonstration required.

As described above, the permit would allow such ADA without demonstration that the use of green waste, biosolids and other ADC can be conducted without the generation of odors which are received by the surrounding community.

Failure to demonstrate intermediate cover requirements

According to 27 CCR §20700(b):

“Alternative materials of alternative thickness (other than at least twelve inches of earthen material) for intermediate cover may be approved by the EA with concurrence by the CIWMB, if the owner or operator demonstrates that the alternative material and thickness control vectors, fires, odors, blowing litter, and scavenging without presenting a threat to human health and the environment.”

In the face of the substantial evidence of odors from the site, the JTD fails to provide any evidence whatsoever demonstrating that the landfill’s intermediate cover plan satisfies the requirements of 27 CCR §20700(b) that the plan will control odors. See JTD discussion, beginning 5.2.1.

Nothing in the JTD's odor section accounts for the significant evidence that the biosolids, co-composting and green waste alternative intermediate cover which would be permitted will control odors. Nor does the thickness of such alternative cover suggested by the JTD meet the requirements of regulation.

Because the permit application does not demonstrate that the site complies with State Minimum Standards regarding nuisance odor and odor control it is incomplete pursuant to 27 CCR §21685(b)(8).

The permit incompleteness

The proposed permit is also incomplete on two other matters: 1) the local land use approvals, and; 2) CEQA mitigation.

The local land use

The facility is required to obtain a planned development district permit. At the time the permit was submitted, and still, that permit has not been obtained. Thus, the permit application was premature and should be rejected as incomplete.

CEQA mitigation

The environmental impact report (EIR) for the facility contained a mitigation plan which the permit indicates will be followed by the operator. See Finding 13(e), Condition 17(a)(2) of the proposed permit.

These mitigation measures are critical to the safe operation of the landfill. Most critically, the permit omits mitigation measure BIO-13.1, a nuisance species abatement plan which includes the requirement that food waste processing be enclosed.

Yet, the JTD fails completely to even recognize these mitigation requirements, particularly in its description of odors and other nuisance. If nothing else, the JTDs are incomplete by utterly failing to describe how the mitigation would intersect with facilities, materials, handling and abatement under the permit.

Thank you for your attention to this matter. The City respectfully submits that a project of this magnitude requires an adequately thorough permit submittal, and requests that it be rejected until this is performed.

Sincerely,

KELLY T. SMITH

Edesa Bit-Badal
Delivered by Electronic Mail

Dear Ms. Badal:

SanDisk management has been notified that the City of San Jose is in the process of reviewing an application regarding the expansion of the Newby Island Landfill. This landfill is located less than half mile from our global headquarters. The odor from this area has become substantially more noticeable and disagreeable in the past few years.

These odors affect our business given the physical location of our facilities, local housing of some of our employees as well our ability to recruit top notch staff. We understand that the odor reputation of this area has become very wide spread and local Realtors report that almost everyone inquiring about property in the area asks about this odor. We have also been informed that this odor affects over 8,000 students within the area.

While SanDisk recognizes the importance of landfills, it is also essential that they operate in concert with the surrounding community. It is disturbing, that in the heart of Silicon Valley, a city adjacent to the landfill has a reputation of a city that has an odor problem.

We would recommend that any expansion of the landfill be denied until a complete and independent study of the odors from the two landfills, Newby Island and Zanker Road, and the Sewage Treatment facility be completed. Once completed, a plan to mitigate the odor, with the participation of both the local governments and businesses in the affected area needs to be coordinated.

We believe there is ample time for this study and urge this course of action be implemented.

Regards,

Tom Baker
Senior Vice President, Human Resources

Kelly T. Smith

Subject: Children's health and quality of life

I am writing on behalf of Milpitas children and all residents. I am a retired Curtner Elementary school teacher currently substituting occasionally. Three years ago there was the sickening odor of garbage at the school sight where there seems to be a pocket of bad air. Students would go outside for recess or lunch and could be heard to say things like, "Ugh, Mrs. Attkisson, what's that yucky smell?", or "Can I go inside, I can't stand it?" One day two years ago the air quality was so horrendous that the school had indoor recess and unplanned indoor lunch. The significant thing here is obvious, as we now have those kind of breathing conditions ALMOST DAILY! This is not acceptable! I have not been to the school lately but will be substituting soon and will give you feedback as to the conditions. As a resident as well, I am extremely concerned for my family. You are welcome to call me at (408)529-1870. Thank you.

CITY OF MILPITAS
OFFICE OF THE CITY MANAGER

455 EAST CALAVERAS BOULEVARD, MILPITAS, CALIFORNIA 95035-5479
PHONE: 408-586-3050, FAX: 586-3056, www.ci.milpitas.ca.gov

DECLARATION OF THOMAS C. WILLIAMS

My name is Thomas C. Williams and I am the City Manager for the City of Milpitas. I have held this position since 2006 and was Planning Director for the City of Milpitas before that. During both positions I have worked daily at City Hall, located at the corner of Milpitas Blvd. and Calaveras Blvd. in the City of Milpitas.

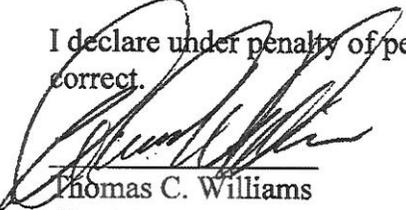

During my time serving Milpitas at that location and others within the City of Milpitas, I have experienced regular assaults by strong and noxious odors from the Newby Island landfill both inside my office and when outdoors at City Hall or other locations within the City. Other citizens and City employees have told me that the smell comes from the landfill.

Over the years I have had occasion to visit the landfill site and it is clear that the landfill contained at Newby Island Resource and Recovery Park (NIRRP) creates foul odors which are extremely pungent and unhealthy.

However, recently I experienced something I had not experienced before. In the week before Christmas day, the odor was so strong that it actually burned my throat and hurt me to breathe. This was from inside my office with the windows closed! I made a call to the Bay Area Air Quality Management District (BAAQMD) hotline and was told that I would get a call the following day from an inspector. I received no call the following day from anyone at BAAQMD.

Meanwhile, in an attempt to independently verify the source of the odor, I got into my car and drove out to NIRRP to see if that was the source of the odor. Because one can enter NIRRP only by permission, I was only able to stand at the entrance to the landfill and could not enter the property to verify the particular source of the odor. I noted that the odor was the same odor as I had earlier experienced from my office at City Hall. I also noted that the odor was definitely coming from NIRRP and not from the Bay or the Water Pollution Control Plant. The foul and pungent landfill odor is a daily nuisance and affects my health.

I declare under penalty of perjury that to the best of my knowledge the forgoing is true and correct.

Thomas C. Williams
City Manager
City of Milpitas

Dated: 1/9/15

STATEMENT OF EXPERIENCING NOXIOUS ODORS

My name is Ani Azizian and I work at Milpitas City Hall, 455 East Calaveras Blvd., located at the corner of Milpitas Blvd. and Calaveras Blvd. in the City of Milpitas. I also am and have been a resident of Milpitas my entire life.

During my time living in Milpitas and working at City Hall in Milpitas, I have often experienced strong, foul, noxious odors in the air. On January 8, 2015, while I was working at City Hall, I noticed the odor right away when I arrived at work at 10:00 a.m., which was very strong. The odor continued to grow stronger throughout the day, even inside City Hall. The odor was so strong and unpleasant that it made me nauseous and my throat started to hurt.

I called the odor reporting hotline for the Bay Area Air Quality Management District (BAAQMD) and made a report of the odor. I received a call shortly thereafter from an inspector, Sharon, who said she was on City Hall property and asked me to meet her in front of City Hall. I met her and confirmed my report of the odor to her, which I could still smell while standing outside speaking with her. I also confirmed that it made me feel nauseous and that I could smell it even inside City Hall. I invited her up to the third floor of the City Hall to smell it herself but she declined, however, she appeared to acknowledge that the odor was present.

The repeated odor smells like garbage and I believe it is coming from the landfill site at Newby Island. In order to confirm this was the source of the odor I went to the Newby Island landfill by car on the same day, January 8, 2015, and arrived there at approximately 2:30 p.m. When we arrived we went through the gate to the entrance of the Newby Island landfill and composting facility site, Newby Island Resource and Recovery Park (NIRRP). We stopped, rolled down both car windows and smelled the air. I confirmed that this was the same foul odor that I had smelled at City Hall, only the degree of the smell was at least ten times stronger at the NIRRP site.

I declare under penalty of perjury that to the best of my knowledge the forgoing is true and correct

Ani Azizian

STATEMENT OF EXPERIENCING NOXIOUS ODORS

My name is Edesa Bitbadal and I work at the Milpitas City Hall, 455 East Calaveras Blvd., located at the corner of Milpitas Blvd. and Calaveras Blvd. in the City of Milpitas. I have worked at City Hall from approximately November, 2014 to the present.

During my short time working at City Hall in Milpitas, I have repeatedly experienced strong, foul, noxious odors in the air. On December 8, 2014, the odor was so bad that I called the odor reporting hotline for the Bay Area Air Quality Management District (BAAQMD) and made a report of the odor. A male inspector came out to City Hall and to my office to investigate approximately one to two hours later. By that time the odor had dissipated somewhat. I continued to experience the foul odor periodically thereafter.

On January 8, 2015, while I was working at City Hall I noticed that the odor was again particularly strong and I could smell it inside the building at approximately 10:00 a.m. The odor continued throughout the day and got stronger, even inside City Hall with the windows closed. The odor was so strong and unpleasant that it made my throat and nostrils burn. Because the odor was so bad, I again called the odor reporting hotline for BAAQMD on January 8, 2015 at approximately 1:30 p.m. and made a report of the odor.

The repeated odor smells like garbage and I believe it is coming from the landfill site at Newby Island. In order to confirm this was the source of the odor I drove to the Newby Island landfill by car with a colleague on the same day, January 8, 2015, and arrived there at approximately 2:30 p.m. When we arrived we went through the gate to the entrance of the Newby Island landfill site, Newby Island Resource and Recovery Park (NIRRP). We stopped, rolled down both car windows and smelled the air. I confirmed that this was the same foul odor that I had smelled at City Hall, only the degree of the smell was overwhelmingly stronger at the NIRRP site.

When I arrived back at City Hall I received a phone call from a BAAQMD inspector who said she would come to City Hall to meet me. Just afterward I also learned that another BAAQMD inspector was already on site at City Hall. I met with her and repeated my report of the odor and answered her questions, including how it was negatively affecting my work and my health. Shortly thereafter the inspector who had called me earlier arrived at City Hall and I gave her a full report as well. I also reported to both inspectors that I had driven to the Newby Island site that same day and confirmed that the odor was coming from the Newby Island landfill site. They both met with me outside in the front of City Hall and both also acknowledged smelling the odor.

I declare under penalty of perjury that to the best of my knowledge the forgoing is true and correct.

Edesa Bitbadal

STATEMENT OF EXPERIENCING NOXIOUS ODORS

My name is Tammy Qualls and I am a contract worker at the Milpitas City Hall, 455 East Calaveras Blvd., located at the corner of Milpitas Blvd. and Calaveras Blvd. in the City of Milpitas. I have worked at City Hall part time for the last two and a half years.

During my time working at City Hall in Milpitas, I have repeatedly experienced strong, foul, noxious odors in the air. Recently, on December 24, 2014, the odor was so bad that I called the odor reporting hotline for the Bay Area Air Quality Management District (BAAQMD) and made a report of the odor. I could smell the odor at my house in northern Sunnyvale—the same type of odor that I was used to smelling at City Hall in Milpitas-- and I placed the call to BAAQMD from Sunnyvale after many of my neighbors gathered to complain and worry about the smell. They did not send an inspector out to meet me. I did get a call back from an inspector and I described the smell to him—I told him it smelled like the dump. I sealed off our house and kept the family inside when normally my children would have played outside.

On January 14, 2015, while I was working at City Hall I noticed that the odor was again particularly strong and I could smell it inside the building at approximately noon. I had to leave the building to buy lunch and was shocked at how intense the smell was outside. My eyes burned and watered from the smell. I have asthma and I had to take short controlled breaths as I walked to lunch. When there is no odor, I usually take a walk on my lunch break. However, during the last week (January 12- 15, 2015) the odors have been so intense that I had to curtail my walks and only go outside when absolutely necessary—to get food or get to my car to drive home.

I declare under penalty of perjury that to the best of my knowledge the forgoing is true and correct.

Tammy Qualls
