

Dear Howard,

Just a quick note to say thanks for an informative workshop last week.

Harvest Power is in support of the grant and loan programs for GHG reductions from Organics. These programs will strengthen our ongoing efforts to expand composting and Anaerobic Digestion facilities for source separated organics in California.

Since our facilities are focused on organically certified final compost products, source separated organics requirements are imperative to ensuring the quality of the product.

Thanks for getting out in front of this process so quickly.

Best regards,  
Linda
