

(1) I have been working on developing climate change adaptation plans for the City of Los Angeles. I am interested to know about climate related grants from the CA recycling program. The grants targeting to the reduction of green house gas emission would be something that I am looking for. Specifically, I am searching for programs providing financial incentives for capital investments that expand the waste management infrastructure in order to reduce greenhouse gas emissions. This grant will augment the City's current efforts to divert more materials from landfills and achieve greenhouse gas emission reduction target.

I had called your office today. I am wondering if you will have time on Monday. I can give you a call to discuss on the opportunities.

Regards,  
Rajat

(2) As I mentioned today I have been working on developing climate change adaptation plans for the City of Los Angeles. I am interested to know about climate related grants from the CA recycling program. The grants targeting to the reduction of green house gas emission would be something that I am looking for. Specifically, I am searching for programs providing financial incentives for capital investments that expand the waste management infrastructure in order to reduce greenhouse gas emissions. This grant will augment the City's current efforts to divert more materials from landfills and achieve greenhouse gas emission reduction target.

I was talking about the following announcement:

The Governor's Draft Budget, released on January 9, 2014, includes \$30 million in Fiscal Year 2014/15 for CalRecycle to provide financial incentives for capital investments that expand the waste management infrastructure in order to reduce greenhouse gas emissions, with a priority in disadvantaged communities. CalRecycle will be administering grants and loans to promote infrastructure development for facilities in California that divert more materials from landfills, achieving greenhouse gas emissions reductions. ..CalRecycle has scheduled this workshop to discuss the draft grant and loan proposals and criteria. The workshop will be webcast and meeting agenda and draft documents will be released approximately one week before the workshop.

Please let me know if you find any suitable match between the type of project I am thinking and available grants. Please send me any information that would be relevant for my inquiry.
