

Hi Brian,

In the Mono Inyo area there is CSA that wants to collect food waste to compost it to grow organic food for the region where it was collected. Problem is this: there is only 2-3% public land in these counties because it is all owned by LA DWP or state and national parks. The parks and DWP don't allow composting. Would a project that located just a couple miles over the border into Nevada for composting be eligible for this grant if the food waste was collected from CA and the crops delivered to customers in CA?

Thank you,

Department of Resources Recycling & Recovery
