Subject: Re: GreenLynx lumber recovery & GHG Grants Assistance -- Quick Question

Hi Stanley,

Re: Fiber Grant

Thank you for the excellent webcast today. In general I had no problems and I was using my mobile and ipad!

I figured I'd follow up on the questions I asked on today's webcast - one of which it was suggested needed to be dealt with on an individual level. I have a few additional questions as well.

1. We're looking to divert lumber from the waste stream, but are new startup division - would you recommend a loan before grant or visa versa?

a. We have identified a processing site and are beginning the permit process, but if funding isn't happening until January, we might need to identify 2-3 additional locations as the owners may not hold the property for 6 months. Would that be acceptable? If not, we could possibly rent the space starting in July to ensure it is available in January, and if necessary that is what we'll have to do.

2. Are there any points for being up higher on the waste heirarchy? Such as reclamation of materials for reentry into the market as is with very little processing vs. recycling? I believe someone else suggested that food waste rescue and animal feed should be higher in value than composting and biogas.

3. We'll be processing lumber for resale to the general public, manufacturers, contractors and designers. Most likely we'd only be able to get binding agreements with a few manufacturers since most contractors purchase as needed. We do have a joint venture we're working on to serve as our retail outlet for the materials, but generally we will be either minimally handling and processing the lumber. In some cases we'll create trim and other secondary products from the lumber, but we feel we're right on the line between a pre-processor and manufacturer.

4. We're in what looks like 66-70% (colors are too close to tell) disadvantaged community zone - does that get us points? We're considering a site near 4055 Santa Rosa Ave Santa Rosa CA. We're also looking at another few properties in what looks to be a 71-75% zone.

5. What is the average tonnage diversion per \$\$ granted, and average GHG reduction per \$\$ granted?

I look forward to hearing from you. If necessary, I could make a trip up to Sacramento if meetings are necessary to see if we can clarify the best course of action for us.

Thanks,

Nicole
