

Pfizer's Safe Sharps Disposal Plan

Background

In accordance with Senate Bill 486, codified within Public Resources Code, Chapter 1 of Part 7 of Division 30, Sections 47115-47116, and Laws of Minnesota 2010, Chapter 286, Senate File No. 1323, Pfizer is required to publish a "Safe Sharps Disposal Plan" which outlines the Company's current sharps disposal support provided to patients who self-inject Pfizer medicines at home, and our plans for next year.

In October 2009, the California Legislature passed and the Governor signed SB 486. The bill requires, on or before July 1, 2010, and annually thereafter, pharmaceutical manufacturers that sell or distribute medication that is self-injected at home through the use of hypodermic needles and other similar devices (i.e., sharps) to submit to CalRecycle a plan that describes how the manufacturer supports the safe collection and proper disposal of the used sharps.

The Minnesota legislation signed by the Governor (April 2010) also requires qualifying companies to post to their websites how they support the safe collection and proper disposal of sharps. As such, this report is posted to [Pfizer's Product Stewardship website](#).

Applicability

Pfizer has several products that are approved for in-home patient self-injection. Many of these products often require refrigeration or freezing. These products are typically provided through specialty pharmacies which are equipped to store and ship the medicines to patients under proper conditions.

Sharps Management

Pfizer aims to provide the framework for how to manage a wide range of sharps according to state and local disposal requirements. In general, the following provisions apply to self-injection medicines in our portfolio:

- Pfizer provides information and instructions for all its self-injected products, nationwide.
- Patients have multiple options to get sharps disposal questions answered, and get assistance in finding a local disposal option nationwide.
- Pfizer provides information to patients to help them understand how to safely dispose of their injection devices, and the state and local requirements for sharps disposal, nationwide.
- Pfizer innovates by offering safer injection devices or by reducing the number of sharps needed to administer its medicines.
- In 2012, Pfizer worked closely with its industry peers to produce a consistent and appropriate approach to sharps disposal.

Provider, Patient and User Education

Doctors, nurse trainers, call center staff and patients have access to <http://www.safeneedledisposal.org> via Pfizer's product stewardship website. This site has an up-to-date summary of state sharps disposal requirements, with links to state programs.

All users of injectable medicines for home use are guided on the safe disposal of used and expired medicines by trained health care providers when they receive their medicines.

Pfizer's Safe Sharps Disposal Plan

All product inserts advise the patient to dispose of sharps in a responsible and appropriate manner in line with the guidance provided by the health care provider.

Additional support and guidance around sharps disposal can be found at the [Pfizer Products website](#).

Product-specific Innovations

While Pfizer is working towards a comprehensive sharps management and disposal program, there are specific initiatives and technologies unique to delivery systems and disposal methods for certain products.
