

Minor Violation Process vs. Current Process for the Inventory

This flow chart illustrates how the [minor violation process](#) works with the [Inventory of Solid Waste Facilities Violating State Minimum Standards](#) (Inventory) process and the issuance of other enforcement actions. When a minor violation is identified by an enforcement agency they are required to send a Notice to Comply to the facility operator. If the operator does not bring the facility into compliance and a violation continues, the LEA has the authority to issue an enforcement order any time after the minor violation compliance date. If after the Minor Violation is cited and two subsequent inspections of the facility show a violation for the same issue, then the operator will be sent a Notice of Intent to List the Facility on the Inventory. A facility will be Listed on the Inventory if a violation persists 90 days after the Notice of Intent is received.
