

(1) Regarding Organics Grant Program and eligible projects:

My company, Clean Waste Technologies, will be extracting a combined organic fraction from mixed MSW which will include paper and food waste homogenized together into one digestible feedstock.

I'm concerned that the proposed language does not directly support our organic feedstock.

(2) We have a byproduct from the AD of pulp/food waste and it is a biopolymer base that can be converted to a renewable carbon fiber through fiber spinning. Is this an eligible project under "fiber"?

Thanks,
