CourtEdge™

REDUCERS

PROBLEM:

New sport floors are often placed on top of existing floors, or a more robust floor is installed, creating vertical barriers. This gymnasium had a new basketball court installed which created a 2-1/2” rise around the whole court, which made it non-compliant, not to mention dangerous.

SOLUTION:

SafePath’s Reducer 1200’s (2-1/2” high) were wrapped around the court, eliminating the barrier, creating a gradual rise and making it ADA compliant and quickly ready to use!

“The world’s largest selection of recycled rubber transitions; each project is hand crafted and custom cut to fit.”
