

# DeckTOP

## Architectural Tiles

## Turn your standard roof or deck into a safer, greener, more versatile space.

Designed specifically for decking applications, our porous and permeable recycled rubber tiles offer superior comfort, durability and protection – all with excellent insulation. Create an attractive, slip resistant, low-maintenance surface for your rooftop decks, patios, plazas, walkways, and more.

DeckTOP Architectural Tiles are available in a variety of pigmented and premium EPDM colors. Transition ramps are also available.

## Features and Product Highlights

- **Durable “floating” deck system** – easy installation over any flat surface, including fragile waterproof roof membranes, with proven SureCONNECT pins for maximum protection and drainage without adhesives or penetrating the roofing membrane
- **Unique grooved bottom design** – creates superior drainage and network channels for easy wiring installation
- **Smooth, durable, permeable surface** – not only comfortable underfoot, but also slip resistant – wet or dry; and porous for exceptional flow through of rain and snow melt
- **Environmentally friendly and safe** – molded from 100% post-consumer waste tires; 100% steel-free certified; no toxic materials; ADA compliant; meets ASTM and SPSC requirements
- **More benefits** – excellent thermal and acoustic insulation; puncture resistant with higher density rubber; easy to maintain with basic cleaning; and each tile weighs less than six pounds per square foot
