

Industrial Surfaces

Industrial settings use a variety of tire derived products from a diverse range of paving technologies, coatings and sealants, roof and flooring systems to rubber mats. The broad array of products are used in both interior and exterior applications and have proven to provide cost effective and enhanced performance, durability , longevity and ultimately protection of the industrial surface investment.

Product benefits may include:

- Surface maintenance and repair options
- Defense against surface deterioration
- Extended life of surface
- UV resistance
- Crack bridging properties
- Enhanced durability
- Long lasting, consistent performance
- Increased traction thus increasing safety

Industrial Surface Applications May Include:

- Fountains, pools, spillways, dams
- Parking lots
- Pool decks and promenades
- Containment structures
- Water and waste water facilities
- Arenas and sports facilities
- Motels, restaurants and office buildings
