

Survivor-WARMS

WEED ABATEMENT ROLLED MATTING SYSTEM – ULTIMATE EROSION AND WEED CONTROL

SURVIVOR-WARMS CAN BE USED IN A NUMBER OF PLACES:

- Guardrails
- Cable Barriers
- Total control over weeds
- Signs
- Beautification Sites
- Signal Boxes
- Telephone Call Boxes
- Over Passes
- Delineators
- Under Fences

How durable is Survivor-WARMS?

Survivor-WARMS is designed as a tough, recycled, rubber material so rugged and strong you can even drive over it repeatedly without damage. It is ideal for areas requiring DOT responsibility and supervision, or around protected habitat or water conservation districts. Even in the unfortunate occurrence of an accident, this material can be reused. It is constructed of recycled car, bus, and truck tires and is ultraviolet resistant to safeguard against deterioration. Estimated life is warranted for 10 years and under normal conditions, may exceed 20 years.

How Easy Is Installation?

Continuous roll or sheet stock: 4' x 4' sheets can be used under existing guardrail or cable barriers. On the sheets, cut-outs for posts can be pre-cut or done on site for a snug fit. We offer a premium all weather urethane sealant to seal the overlap area. The use of continuous roll on new construction can afford major savings in labor costs for your bid by simply punching the posts the rubber. Once the matting is in place the weight of the mats, 2.5lbs per square foot, should be sufficient to keep them in place but specially designed stainless steel spikes are available to safeguard against such things as high winds or water tables.
