

# Paths, Walkways, Sidewalks & Bike Trails

Tire-derived products are used to create attractive, high performance paths, walkways, sidewalks and bike trails. Incorporating rubber provides added safety, durability, reduced maintenance and flexibility that makes these products ideal choices in diverse commercial, residential and public settings, regardless of climate. They can also enhance the qualities and performance of manufactured and installed ADA compliant accessible routes.

## **Paths, Walkways, Sidewalks & Bike Trails Benefits May Include:**

- Diverse colors, designs and sizes
- Shock absorption and impact resistant
- Durable and long-lasting with very low degradation compared to alternatives
- Low installation and maintenance costs
- Flexibility to accommodate tree root growth longer
- Permeable depending on product type

## **Paths, Walkways, Sidewalks & Bike Trails Applications May Include:**

- Parks, commercial landscaping and public walkways
- Sidewalks, paths and bike trails
- Commercial, residential and public landscaped areas
