

PROBLEM

Concrete sidewalks are uplifted by tree roots.

Trees struggling for air and water develop large and invasive root systems under concrete.

RUBBERSIDEWALKS

SOLUTION

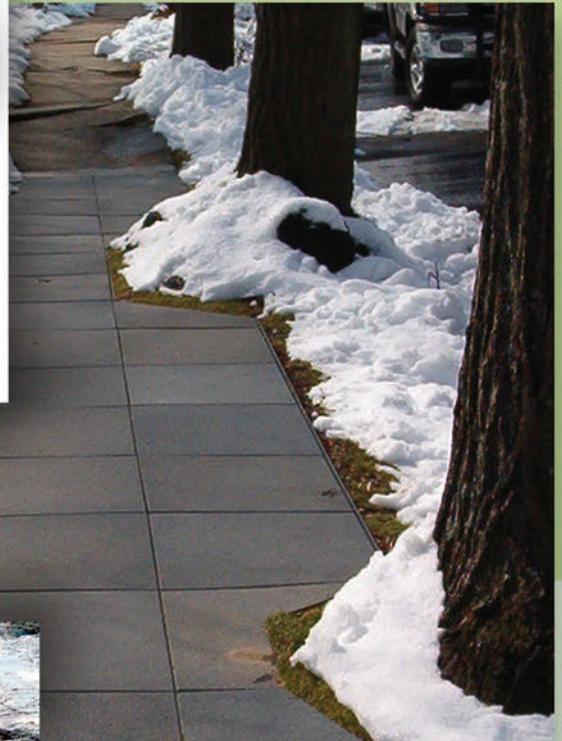

A MODULAR SIDEWALK SYSTEM

Easy and economical to install, tree roots grow less invasively beneath Rubbersidewalks offering a new strategy for sidewalk maintenance. Proven and tested in cold weather climates.

Rubbersidewalks are made of 100% recycled waste tire content. Each square foot diverts one passenger tire from land fills.

Three Years Later

Rubbersidewalks modularity allow roots to be periodically inspected and trimmed as needed.
