

# Roofing

Tire-derived roofing products include torch-applied modified bitumen roofing membranes, simulated cedar shake roofing systems and flooring systems designed for rooftop decks. These products can provide added durability, safety and other enhancements over competing products.

## **Roofing Benefits May Include:**

- Wide range of colors and designs
- Easy to install
- Enhanced thermal and acoustic insulation
- Durability and increased lifetime
- Reduced cost
- Enhanced comfort and safety in rooftop decks due to slip-resistance, shock absorption and permeability

## **Roofing Applications May Include:**

- Use in residential and commercial roofing systems
- Replacement for APP modified bitumen membranes
- Replacement for traditional cedar shake roofing systems
- Installation of entertainment areas on rooftop decks
