

Synthetic Turf

Artificial turf and synthetic grass derived from recycled tires are progressively finding their way into a variety of applications from residential and commercial uses to outdoor sports. Outdoor sports applications include:

- Soccer fields
- Football and rugby fields
- Golf courses
- Field hockey
- Tennis courts

These products are proving to be more and more competitive with their traditional counterparts as their potential benefits extend beyond cost effectiveness into enhanced performance and durability.

Product benefits* may include:

- Durability
- Low cost and easy installation and maintenance
- Reduced injuries from falling due to shock absorption
- Reduced water usage
- Reducing or eliminating weed growth
- Resistant to insects, mildew and fungus growth
- Green all year round and in all climates
- Reduces noise level by absorbing sound
