 GroundRubber Solutions™ by West Coast Rubber Recycling

GroundRubber Buffings

We produce and deliver feedstock materials to our customers for their end market products and service offerings. Buffings are produced from recycled truck tire tread when the worn-down tread is removed from the tire prior to retreading. Buffings are usually thin slivers of rubber and make a natural choice for playgrounds and landscape surfaces. GroundRubber Buffings are used in the construction of pour-in-place safety surfacing systems. Order now GroundRubber Buffings from West Coast Rubber Recycling.

Applications

- Landscape mulch
- Pour-in-place playground surface
- Base layer of rubber surfaces
- Top coat of rubber surfaces
- Molded rubber products

Benefits

- Impact absorbing
- Elasticity
- Does not decompose
- Environmentally safe
- Long lasting
- 100% use of recycle tire rubber

Colors

- Black

Sizes

- 3/8" buffings
