

Benefits:

- Improved beach access for people with limited mobility
- Recycled rubber boardwalk extensions last longer than wooden boardwalk planks
- Enhanced comfort when walking

Manufacturing process: Crumb rubber made from recycled tires is blended with a polyurethane binder. After the blend is poured into molds, the mold press is heated and put under pressure for a few minutes. The molded products are then pulled out of the mold and cooled for 24 hours before shipment.

A wide variety of high-quality, proven products are made from California's recycled tires. For more information, and a list of vendors, visit CalRecycle online at:
