\*Haulers exporting solid waste are required to report under DRS, and will still be required to report under RDRS as well. Under RDRS regulations, contract haulers sending reportable material to direct land application in-state, or who haul reportable materials out-of-state, and who meet or exceed the quarterly *de minimis* tonnage threshold will be required to register and report for each quarter for which they meet/exceed the applicable threshold. Contract haulers who only haul material in-state to a reporting entity are not and have never been required to report in either data system.
