TEACH COMMON CORE STANDARDS WITH THE EEI CURRICULUM

Created with your needs in mind, this document shows the correlation between the EEI Curriculum and the California Common Core State Standards. By teaching the EEI unit lessons in your classroom, you will be simultaneously addressing the Common Core standards depicted in this guide.

B.6.b.—Ecosystem Change in California

In this unit, students learn how to analyze ecosystem change through an in-depth study of one of the most altered ecosystems in the world, the California grasslands. Students examine factors that lead to climate change and its effects on an ecosystem. Students focus on how human activities have contributed to change in this ecosystem. By the end of this unit, students will understand the complex interactions of natural and human-caused factors that contribute to ecosystem change.
Using the EEI-Common Core Correlation Matrix

The matrix on the front page identifies a number of Common Core standards that are supported by this EEI unit. However, the check marks in the matrix do not necessarily signify that the Common Core standards checked will be taught to mastery by using this EEI unit alone. Teachers are encouraged to select which Common Core standards they wish to emphasize, rather than teaching to every indicated standard. By spending more time on selected standards, students will move toward greater Common Core proficiency in comprehension, critical thinking and making reasoned arguments from evidence. Teaching this EEI unit will provide opportunities for teachers to implement the shift in instructional practice necessary for full Common Core implementation.

California Common Core State Standards Abbreviations

- CCCSS: California Common Core State Standards
- RST: Reading Standards for Literacy in Science and Technical Subjects
- SL: Speaking and Listening Standards
- WHST: Writing Standards for Literacy in History-Social Studies, Science, and Technical Subjects

Note: Since each Common Core standard includes a breadth of skills, in this correlation, the portion of the standard description that is featured in the Common Core standards applications is cited, using “…” to indicate omitted phrases. For a list of the complete standard descriptions, please see the Common Core Reference Pages located on pages 16–17 of this document.

A Note about Common Core Speaking and Listening Standards

Throughout this unit, students participate in various learning structures and groups to analyze, discuss, and synthesize data, which supports the skill in Speaking and Listening Standard 1 “Participate effectively in a range of collaborative discussions (one-on-one, groups...) with diverse partners.” With prior instruction on collaborative discussions, these various groupings and the materials students examine lend themselves to prime discussion material for collaborative discussions. Learning structures with tasks for pairs and groups are in the following lessons:

- Lesson 1: Pairs
- Lesson 2: 5 Groups
- Lesson 3: 5 Groups
- Lesson 4: Groups—these can be different than the previous lesson groups
- Lesson 5: Pairs; Groups—these can be different than the previous lesson groups
- Lesson 6: Whole class

| **Alternative Assessment** | |
| Students use documents from the unit to write a narrative report detailing what a California grassland experiences after a brush fire occurs, followed by heavy rainfall. | **RST.9–10.5:** Analyze the structure of the relationships among concepts in a text...  
**RST.9–10.10:** ...read and comprehend science...texts... independently and proficiently.  
**WHST.9–10.2:** Write informative/explanatory texts, including the narration of historical events, scientific...processes.  
a) Introduce a topic and organize ideas, concepts, and information...  
b) Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information...  
c) Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among ideas and concepts.  
d) Use precise language and domain-specific vocabulary...  
f) Provide a concluding statement or section that follows from and supports the information or explanation... |
Lesson 1: Fields of Green and Gold

To examine ecosystem change, students analyze a reading to identify and list different variables that have altered California’s grasslands, exploring how each factor has changed this rapidly vanishing ecosystem. This lesson provides a background for students to understand the ecology and rarity of California grasslands, one of the most altered ecosystems on Earth. This background prepares them for the rest of the unit, in which they use scientific methods to understand the implications of such dramatic change.

<tr>
<td><strong>Vocabulary Development:</strong> For depth of understanding, vocabulary may be featured within the context of the unit instead of or in addition to the beginning of the lesson.</td>
<td><strong>RST.9–10.4:</strong> Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context…</td>
</tr>
<tr>
<td><strong>Step 1:</strong> In pairs, students discuss what the area now occupied by their school may have looked like 100 and 100,000 years ago and record their ideas in columns.</td>
<td><strong>SL.9–10.1:</strong> …participate…in a range of collaborative discussions…</td>
</tr>
<tr>
<td><strong>Step 3:</strong> Students read California Connections: The Transformation of Our Native Grasslands (Student Edition, pages 2–5) to determine what has caused California grassland areas to change over time. To increase Common Core applications, ask students to note how science terms are defined during the text. In addition, ask them to note how the text structures the ideas and to determine the author’s purpose in providing each explanation. In addition to reading California Connections for content, students should look at several key elements on how the writing is structured. This can be done while they’re reading or during a second reading of the material. Students who have been familiarized with this process can identify these structural elements as they read by themselves and then they can be discussed as a class. Refer to the Reading California Connections Using a Common Core Reading and Writing Focus on pages 11–15 to view specific suggestions for integrating Common Core standards while reading this selection not only for content, but for text structure as well.</td>
<td><strong>RST.9–10.4:</strong> Determine the meaning of…key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context… <strong>RST.9–10.5:</strong> Analyze the structure of the relationships among concepts in a text, including relationships among key terms… <strong>RST.9–10.6:</strong> Analyze the author’s purpose in providing an explanation,… defining the question the author seeks to address. <strong>RST.9–10.10:</strong> …read and comprehend science…texts…independently and proficiently.</td>
</tr>
</tbody>
</table>
### Student Tasks

**Step 4:** Using *California Grasslands: A Changing Ecosystem* (Student Workbook pages 3–4), students list variables that have altered the California grasslands, and describe how these changes have altered the grassland ecosystems, including biotic and abiotic components.

**Step 5:** Students discuss the *California Connections* article, using discussion prompts.

**Common Core Note:** Increase the Common Core elements in the discussion by encouraging students to build on each others’ ideas, cite evidence from the text, and pose questions that probe reasoning and evidence in the text and in each others’ comments. Prior to the discussion, review the criteria for collaborative discussions in standard **SL.9–10.1**.

### Common Core Standards Applications

- **RST.9–10.1:** Cite specific textual evidence to support analysis of…texts, attending to the precise details of explanations or descriptions.
- **RST.9–10.2:** Determine the central ideas;…trace the text’s explanation or depiction of a complex process…or concept; provide an accurate summary of the text.
- **WHST.9–10.2:** Write informative/explanatory texts…

- **SL.9–10.1:** …participate…in a range of collaborative discussions (…teacher-led)…
Lesson 2: Surveying an Ecosystem for Evidence of Change

In this lesson, students mimic the work of researchers as they collect data from a sample grassland plot and analyze their data for clues about environmental change. After comparing different survey methods, students in five groups apply one surveying technique to collect data from their sample grassland plot. Students analyze their data to understand the grassland’s current ecological makeup, and make predictions about changes to this ecosystem in the past as well as changes that might occur in the future.

Use this correlation in conjunction with the Procedures located on pages 54–56 of the Teacher’s Edition. Only procedure steps with a Common Core correlation are included in the table below.

<table>
<thead>
<tr>
<th>Student Tasks</th>
<th>Common Core Standards Applications</th>
</tr>

<tbody>
<tr>
<td><strong>Vocabulary Development:</strong> For depth of understanding, vocabulary may be featured within the context of the unit instead of or in addition to the beginning of the lesson.</td>
<td><strong>RST.9–10.4:</strong> Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context…</td>
</tr>
</tbody>
</table>

**Step 3:** Five groups survey and collect data from sample grassland plots (quadrats), and then share their survey results. They analyze the data as a group or class, making predictions and completing *Survey of a Grassland, Part 2* (Student Workbook, pages 5–7).

| **RST.9–10.7:** …translate information expressed visually…into words. **SL.9–10.1:** …participate…in a range of collaborative discussions…(…in groups…)... c) Propel conversations by posing and responding to questions;…actively incorporate others into the discussion; and clarify, verify and challenge ideas and conclusions. **SL.9–10.4:** Present information, findings, and supporting evidence clearly, concisely, and logically… |

**Step 6:** Students discuss the data the groups have collected as a class. While students discuss the questions listed in this step, remind them to refer to specific evidence in the data and the images to support their conclusions or predictions. In addition, encourage students to come up with their own questions to ask of the data and/or the images.

**Tip:** The discussion outlined in the lesson plan can be conducted as a collaborative discussion. Rather than the teacher presenting them, assign the Step 6 questions to discussion leaders, who facilitate a discussion where students are challenged to back up their ideas with evidence or clarifying thoughts rather than simply a question/answer session. Students should also be encouraged to generate their own questions related to the data and explore possible explanations.

| **RST.9–10.7:** …translate information expressed visually…into words. **SL.9–10.1:** …participate…in a range of collaborative discussions…(…in groups…)... c) Propel conversations by posing and responding to questions;…actively incorporate others into the discussion; and clarify, verify and challenge ideas and conclusions. **SL.9–10.4:** Present information, findings, and supporting evidence clearly, concisely, and logically… |
Lesson 3: Climate Clues in Tree Rings and Pollen Cores

Students explore how climate has altered the grassland ecosystem over the past 24,000 years. Students discuss climate and climate change and then five groups analyze tree ring and pollen sample data from actual studies of grasslands in California’s Central Valley. They interpret how climatic variables have changed the grassland at the Rancho Grassland Study Site over time. By the end of the lesson, students can provide examples of how climate alters aspects of the grassland ecosystem, categorize the effects of climatic changes as short-term or long-term, and identify factors that influence the scope, scale, and duration of change.

Use this correlation in conjunction with the Procedures located on pages 78–79 of the Teacher’s Edition. Only procedure steps with a Common Core correlation are included in the table below.

</table>
Lesson 4: Examining Human Use of the Grasslands

In this lesson, students use primary source documents to uncover clues about human activities and grassland ecosystems from the past 250 years, exploring how these activities caused ecological change. Students read from the journals of Spanish missionaries and leaders from the 1700s and examine hand-drawn maps of Spanish ranches from the 1800s, then compare them to images of modern aerial photographs of a grassland area similar to the sample students have been using. Students summarize their findings, and then review a flowchart of cause-and-effect relationships, discussing how variables can cause both cumulative and synergistic effects on an ecosystem.

**Lesson 5: Grassland Invaders**

In this lesson, students explore the synergistic effects of human activities and introduced nonnative species on California grassland ecosystems. Students identify traits which increase the chances that one species will outcompete other species in an ecosystem. Classroom discussion focuses on the different ways that species become invasive, whether these changes are short-term or long-term, and how other variables contribute to the changes caused by invasive species. Students analyze plant data from an adobe brick for clues about invasive species and discuss the factors and traits that may have led to the nonnative species outcompeting the native species, altering the species composition in California grasslands to this day.

Use this correlation in conjunction with the Procedures located on pages 110–111 of the Teacher’s Edition. Only procedure steps with a Common Core correlation are included in the table below.

</tbody>
</table>
Lesson 6: The Management of Ecosystems

In Lesson 6, students explore how decisions are made about human activities that alter the grasslands. They compare maps of grasslands and examine decision-making factors and processes that are a part of ecosystem management, exploring how different decision makers, analysts, and stakeholders influence the process based on different objectives and goals. Students then explore processes used in ecosystem management, focusing on how governments and private landowners use conservation easements to attain their goals of ecosystem preservation while balancing the needs of human communities, and begin to realize the complexity of decision making concerning the future of California's grasslands.

Unit Assessment

Refer to the introduction pages at the front of this document for information regarding the Traditional and Alternative Assessments for this unit and their Common Core correlations.
Reading California Connections using a Common Core Reading and Writing Focus

Reading
Science teachers can further enhance the teaching of Common Core Reading Literacy Standards by noting the suggestions below and in the following pages while reading the California Connections selection for content. Explicitly teach students to pay attention to the structure of the text by noting the following:

- Note how the author cites evidence to support main points; note any gaps or inconsistencies. (RST.9–10.1 and RST.11–12.1)
- Note how the author sets up the central ideas or conclusions; trace the text’s explanation or depiction of a process or concept; summarize concepts, processes, and information by paraphrasing the text and the text as a whole. (RST.9–10.2 and RST.11–12.2)
- Note how the author explains multi-step procedures. (RST.9–10.3 and RST.11–12.3)
- Note how the author explains the meaning of key terms, symbols, domain specific words, and phrases. (RST.9–10.4 and RST.11–12.4)
- Analyze the structure of the relationships among concepts in a text, and the relationships among key terms, including categories or hierarchies. (RST.9–10.5 and RST.11–12.5)
- Analyze the author’s purpose in providing an explanation, or describing a procedure, and how this defines the question the author seeks to address; identify important unresolved issues. (RST.9–10.6 and RST.11–12.6)
- Note how the information in the California Connections text integrates with information provided throughout the unit in diverse formats, including tables, charts, maps, and quantitative data. (RST.9–10.7 and RST.11–12.7)
- Assess the extent to which the reasoning and evidence in a text support the author’s claim; evaluate the analysis and conclusions in the text. (RST.9–10.8 and RST.11–12.8)
- When other documents are included, compare and contrast findings presented in this text to those in other sources, noting when the findings support or contradict previous explanations. (RST.9–10.9 and RST.11–12.9)
- Note comprehension strategies for understanding text. (RST.9–10.10 and RST.11–12.10)

Note: Standard descriptions are paraphrased using a mix of grades 9–10/11–12 terminology that applies to reading a California Connections selection.

Writing
Many California Connections selections can be used as a model for future student writing tasks applying the Writing Literacy Standards by noting how the author structures the text, organizes the ideas, and provides well-chosen relevant and sufficient facts, extended definitions, concrete details, quotations, or other information and examples.

The following pages feature the California Connections selection, identifying specific locations in the text that demonstrate Common Core Reading and Writing Literacy Standards for Science and Technical subjects.

Using the California Connections Selection
The following pages note specific places where the California Connections selection provides examples for specific Writing Literacy Standards for Science and Technical subjects, using this selection as a writing model. They also provide suggestions for teaching students to analyze text structure using the Reading Literacy Standards for Science and Technical subjects. Teachers can incorporate more suggestions from the list above.
Introduction: Includes an attention grabber.

**RST.9–10.6:** Analyze the author’s purpose in providing an explanation...

**Suggestion:** Ask what the author’s purpose is for including this explanation.

**RST.9–10.8:** Assess the extent to which the reasoning and evidence in a text support the author’s claim...

- Are these claims supported in the text?

**RST.9–10.10:** Read and comprehend science/technical texts... independently and proficiently.

**Suggestion:** Throughout the reading, note comprehension strategies for understanding the text.

**RST.9–10.1:** Cite specific textual evidence to support analysis of science...texts, attending to the precise details of explanations or descriptions.

**Suggestion:** While reading, have students summarize sections of the material, citing evidence from the text.

**The Transformation of Our Native Grasslands**

Rolling, green-grassy fields are an icon of California. Therefore, it may come as a surprise to learn that those “waves of grain” are actually barnyard weeds from Spain and other Mediterranean areas. Ninety-nine percent of California’s grasslands today are made up of plant species from Europe and other continents. In fact, grasslands have been altered more than any other ecosystem in the state, and are among the most endangered in the nation.

**Clues to the Past**

The transformation of California’s native grasslands was rapid and widespread. Because of this, no one knows what these grasslands really looked like at the time of first European contact. We can only glimpse the past by looking at remnant patches of native grasses that exist today. Scientists search for clues in fossilized pollen, archeological sites, and historical accounts. They use these clues to answer questions about how our native grasslands came to be, how these ecosystems functioned, and how they declined so rapidly.

From the fossil record, we know large changes in California’s grasslands took place over the past 10,000 years. Grasslands at times were much larger and covered more area than today, and at other times, they covered less area. The fossil record indicates that 6,000 years ago, California received more rain than present day. Two thousand years later, the climate became drier, similar to what our climate is today—a cool, wet winter followed by a long, warm, dry season that lasts through late fall. During the rainy season, the grasses grew. The long, dry seasons opened up space for more of the species mix in California’s native grasslands. Large grazers, such as tule elk and pronghorn antelope, evolved alongside seasonal native grazers, such as prairie dogs and pocket gophers. In addition, some are short-lived, 10 years or less. Native grazers and fire together help maintain these ecosystems, so much so that they appear bumpy. That is because most of the grass has been eaten by grazers.

When you see an area that is “green” over the driest months, such as July and August, that is because purple needlegrass (Nassella pulchra) is present. This species has a special trait that enables it to survive occasional mowing and fires. Purple needlegrass is a perennial species that is native to California, purple needlegrass, is one of the state grasses. It has average depths of 6 to 8 feet, with root hairs extending as much as 18 feet or more down into the soil. This allows this grass to take advantage of water and nutrients even during the dry season. Its roots may grow as much as 6 to 8 feet. Purple needlegrass stays fairly “green” over the driest months. However, unlike annual grasses, purple needlegrass does not die back and lose a lot of its carbon from the atmosphere. Large amounts of carbon are developed topsoil. In addition, fire helps maintain purple needlegrass. Fires allow native grazers to access the grass in the grassland edge. Large grazers, such as tule elk and pronghorn antelope, burn (fires) to improve hunting conditions for wolves, pronghorn antelope, and other wolf species. In addition, fires help keep the grass short, allowing the species mix in California’s native grasslands.

Grasslands are an important natural system. Perennial grass species are one of the most productive ecosystems on the planet. For example, purple needlegrass is a good carbon sink, storing carbon as much as any other grass species. It has developed topsoil. In addition, fire helps maintain purple needlegrass. Fires allow native grazers to access the grass in the grassland edge. Large grazers, such as tule elk and pronghorn antelope, burn (fires) to improve hunting conditions for wolves, pronghorn antelope, and other wolf species. In addition, fires help keep the grass short, allowing the species mix in California’s native grasslands.

Our Native Grasslands are an ecosystem in the state, and are among the most endangered in the nation.
California Connections: The Transformation of Our Native Grasslands

WHST.9–10.2b: Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, ...or other information and examples...

WHST.9–10.2c: Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among ideas and concepts.

RST.9–10.2: Determine the central idea…of a text; trace the text’s explanation…of a concept…
The decrease in native bunch grasses is a significant concern as these spaces can also become resting places for acorns—the seeds of an oak tree. For this reason, there is room between bunch grass and acorn waiting to germinate—is particularly disconcerting. Grasslands made up of native perennial grasses were studded California grasslands. When these trees drop their acorns in the “bunches” there is room for native wildflowers to grow. Research into this feature of grasslands is ongoing.

Native California grasslands are many factors contributing to the decline in native oaks, but this one—the connection to the decrease in native bunch grasses may have led to their replacement by acruland and woodlands. Grasslands around the Spanish missions were plowed under, wiping out native seed banks. On top of this, Europeans accidentally introduced the yellow dwarf virus to North America by planting contaminated barley. Aphids spread the virus quickly through the grasslands, causing massive amounts of native grasses to die off.

As the roots decompose, they allow it to flow underground allowing the soil to store the water later in the dry season, open up channels for rainwater to infiltrate deeply as well. This renewal for the native perennial grasses may have led to their replacement by acruland and woodlands. Grasslands around the Spanish missions were plowed under, wiping out native seed banks. On top of this, Europeans accidentally introduced the yellow dwarf virus to North America by planting contaminated barley. Aphids spread the virus quickly through the grasslands, causing massive amounts of native grasses to die off.

Nonnative grasses, while the bricks from later missions contained progressively more and more seeds of European grasses. European grasses are very competitive. They produce thousands of seeds per square foot, germinate quickly, grow rapidly, and tolerate drought. Annual grasses tend to grow taller, and the thatch smothers natives. However, studies have shown that they cannot outcompete established native bunch grasses by rapid reproduction alone. There had to be some other factor at work, giving the nonnative grasses from Europe an “edge” over the native bunchgrasses. One theory is grass species from Europe were better adapted to the disruptive activities of large human populations. Even though American Indians settled in and around California grasslands, Europeans colonizers brought about a significant increase in the level of human-caused disturbances. Spanish livestock grazed all year, rather than seasonally, as did the native tule elk and pronghorn antelope species they displaced. The Spanish also prevented American Indians from controlled burning of the grasslands. This source of renewal for the native perennial grasses may have led to their replacement by acruland and woodlands. Grasslands around the Spanish missions were plowed under, wiping out native seed banks. On top of this, Europeans accidentally introduced the yellow dwarf virus to North America by planting contaminated barley. Aphids spread the virus quickly through the grasslands, causing massive amounts of native grasses to die off.

Managing and Protecting What Remains

Many threatened and endangered species live in the relit patches of grassland that exist today, bringing public attention to the grassland’s decline. Despite the attention, grasslands remain one of the most under-protected ecosystems in the state. As California’s population continues to grow, pressures on these grassland ecosystems intensify. Climate continues to change, now at an unprecedented rapid rate due to human activities, pushing native species to their limit and beyond. Our understanding of the value of our native grasslands has increased. Several private conservation organizations and state and local agencies are acting to help protect what native grasslands remain.
California Common Core State Standards Descriptions for Grades 9–10

Reading Literacy Standards in Science and Technical Subjects

- **RST.9–10.1:** Cite specific textual evidence to support analysis of science and technical texts, attending to the precise details of explanations or descriptions.
- **RST.9–10.2:** Determine the central ideas or conclusions of a text; trace the text’s explanation or depiction of a complex process, phenomenon, or concept; provide an accurate summary of the text.
- **RST.9–10.4:** Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 9–10 texts and topics.
- **RST.9–10.5:** Analyze the structure of the relationships among concepts in a text, including relationships among key terms (e.g., force, friction, reaction force, energy).
- **RST.9–10.6:** Analyze the author’s purpose in providing an explanation, describing a procedure, or discussing an experiment in a text, defining the question the author seeks to address.
- **RST.9–10.7:** Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words.
- **RST.9–10.8:** Assess the extent to which the reasoning and evidence in a text support the author’s claim or a recommendation for solving a scientific or technical problem.
- **RST.9–10.9:** Compare and contrast findings presented in a text to those from other sources (including their own experiments), noting when the findings support or contradict previous explanations or accounts.
- **RST.9–10.10:** By the end of grade 10, read and comprehend science/technical texts in the grades 9–10 text complexity band independently and proficiently.

Speaking and Listening

- **SL.9–10.1:** Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 9–10 topics, texts, and issues, building on others’ ideas and expressing their own clearly and persuasively.
  c) Propel conversations by posing and responding to questions that relate the current discussion to broader themes or larger ideas; actively incorporate others into the discussion; and clarify, verify, or challenge ideas and conclusions.
- **SL.9–10.4:** Present information, findings, and supporting evidence clearly, concisely, and logically (using appropriate eye contact, adequate volume, and clear pronunciation) such that listeners can follow the line of reasoning and the organization, development, substance, and style are appropriate to purpose (e.g., argument, narrative, informative, response to literature presentations), audience, and task. CA
Writing Standards for Literacy in History-Social Studies, Science, and Technical Subjects

- **WHST.9–10.1:** Write arguments focused on discipline-specific content.
  a) Introduce precise claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that establishes clear relationships among the claim(s), counterclaims, reasons, and evidence.

- **WHST.9–10.2:** Write informative/explanatory texts, including the narration of historical events, scientific procedures/experiments, or technical processes.
  a) Introduce a topic and organize ideas, concepts, and information to make important connections and distinctions; include formatting (e.g., headings), graphics (e.g., figures, tables), and multimedia when useful to aiding comprehension.
  b) Develop the topic with well-chosen, relevant, and sufficient facts, extended definitions, concrete details, quotations, or other information and examples appropriate to the audience's knowledge of the topic.
  c) Use varied transitions and sentence structures to link the major sections of the text, create cohesion, and clarify the relationships among ideas and concepts.
  d) Use precise language and domain-specific vocabulary to manage the complexity of the topic and convey a style appropriate to the discipline and context as well as to the expertise of likely readers.

California Common Core State Standards Descriptions for Grades 11–12

Reading Literacy Standards in Science and Technical Subjects

- **RST.11–12.7:** Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem.

Speaking and Listening

- **SL.11–12.1:** Initiate and participate effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grades 11–12 topics, texts, and issues, building on others' ideas and expressing their own clearly and persuasively.
  c) Propel conversations by posing and responding to questions that probe reasoning and evidence; ensure a hearing for a full range of positions on a topic or issue; clarify, verify, or challenge ideas and conclusions; and promote divergent and creative perspectives.

Writing Standards for Literacy in History-Social Studies, Science, and Technical Subjects

- **WHST.11–12.1:** Write arguments focused on discipline-specific content.
  a) Introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims, and create an organization that logically sequences the claim(s), counterclaims, reasons, and evidence.
